## Do You Know about E-Challan?

As the name suggests, e-challan is a digitised challan.

E-challan – Digital Traffic Enforcement Solution is a government initiative undertaken by the Ministry of Road Transport and Highways in an attempt to enforce traffic laws more effectively and strictly.

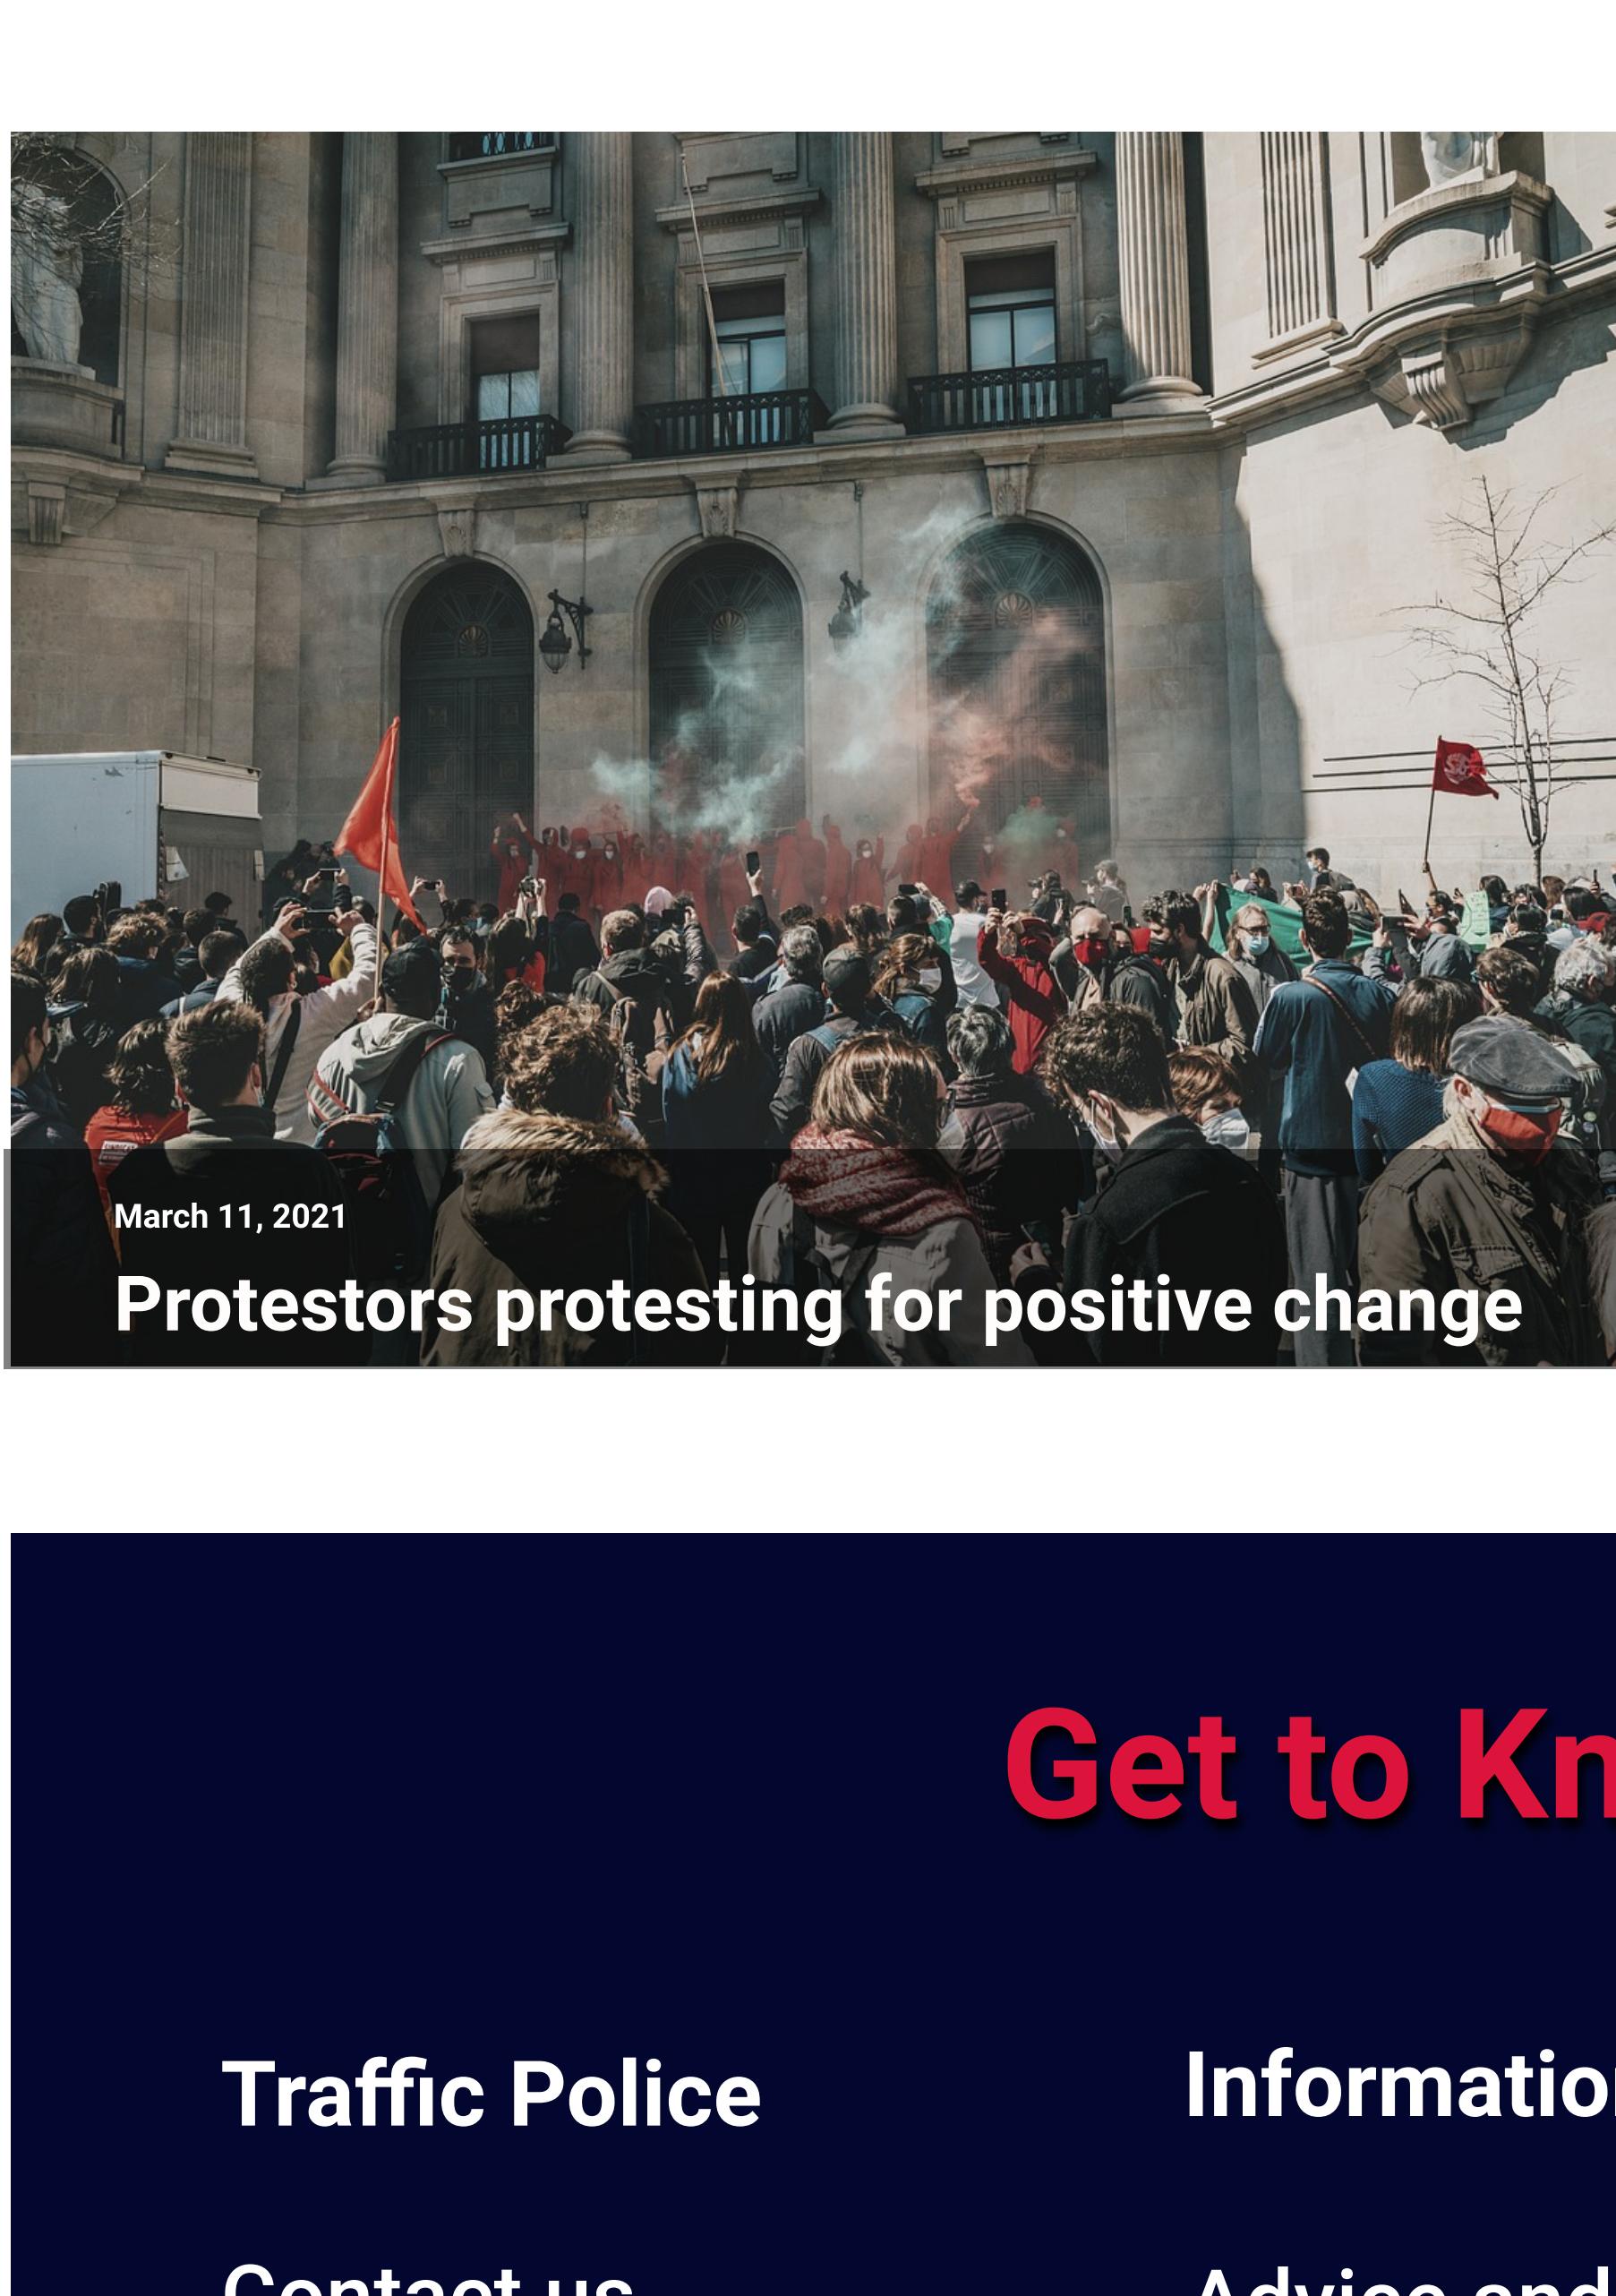

Through this, the government has decided to nearly do away with physical challans.

## How does e-challans work?

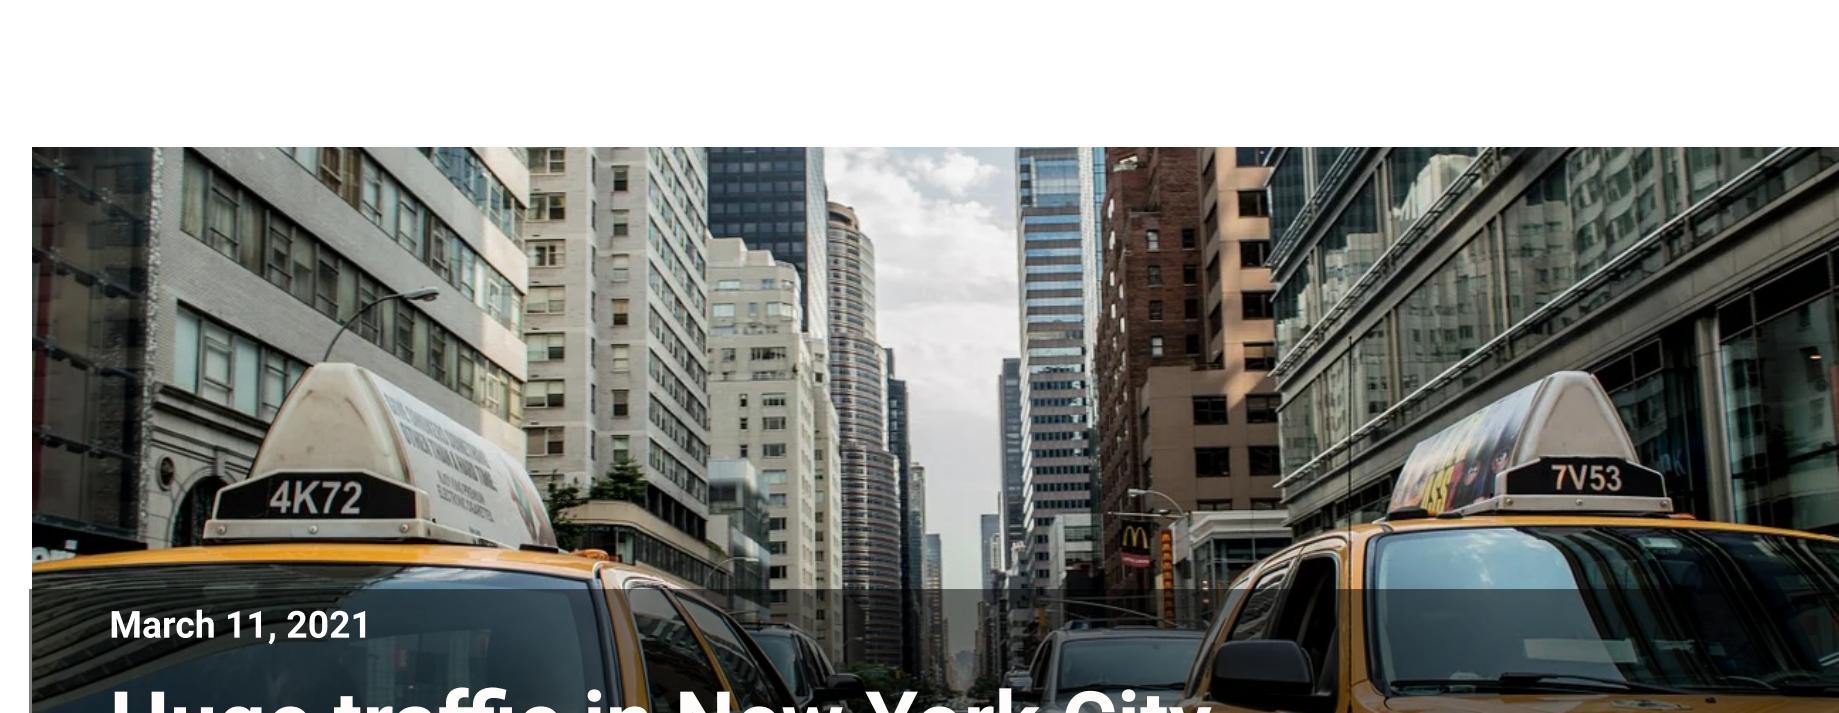

You are cruising through the desolate Delhi roads in the nocturnal hours with no care for worldly matters whatsoever and have disregarded a red light in tandem with your blithe. But, sadly, in contrast to your mood, you are still very much on Earth and in Kathmandu, Nepal where CCTV cameras have been installed across the city. Disrupting your elation, you hear your message tone calling you to a text from the KTM Traffic Police Department notifying you that an e-challan has been generated to your name for inadvertently crossing a red light.

This is how an e-challan works.
